TC2
High Precision Thin Film chip resistors Size 2512, 2010, 1210,-1206, 0805, 0603, 0402
AEC-Q200 Compliant

*Contents in this sheet are subject to change without prior notice.

## FEATURE

1. SMD metal film resistor
2. High reliability and stability of $0.5 \%$ and below per customer request
3. High performance of TCR: $2 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ and below per customer request
4. Low current noise
5. RoHS compliant and lead free
6. AEC-Q200 compliant

## APPLICATION

- Automotive
- Medical equipment
- Measuring instrument
- Communication device
- Electronic Devices

## DESCRIPTION

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive layer that is applied to the top surface of the substrate. The composition of the resistive layer is adjusted to give the approximate resistance required and the value is trimmed to nominated value within tolerance which controlled by laser trimming of this resistive layer.
The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For environmental soldering issue, the outer layer of these end terminations is a Lead-free solder.

Fig 1. Construction of Chip-R WFxxC_Q

## QUICK REFERENCE DATA

| Item | General Specification |  |  |  |  |  |  |

| 10 | 124 | 22 | 165 | 34 | 221 | 46 | 294 | - 58 | 392 | 70 | 523 | 82 | 698 | 94 | 931 |
| 11 | 127 | 23 | 169 | 35 | 226 | 47 | 301 | м 59 | 402 | 71 | 536 | 83 | 715 | 95 | 953 |
| 12 | 130 | 24 | 174 | 36 | 232 | 48 | 309 | 60 | 412 | 72 | 549 | 84 | 732 | 96 | 976 |

- 4-digits marking for 2512, 2010, 1210, 1206, 0805 size

For E24+E96, each resistor is marked with a four digits code on the protective coating to designate the nominal resistance value. For values below $97 \Omega 6$ the $R$ is used as a digit. For values of $100 \Omega$ or greater, the first 3 digits are significant, the fourth digit indicates the number of multiple to follow.

## Example

| RESISTANCE | $100 \Omega$ | $6800 \Omega$ | $47000 \Omega$ |
| :---: | :---: | :---: | :---: |
| 4-digits marking | 1000 | 6801 | 4702 |

- No marking code for 0402 size

## FUNCTIONAL DESCRIPTION

## Product characterization

Standard values of nominal resistance are taken from the E192 \& E24 series for resistors with a tolerance of $\pm 1.0 \%, \pm 0.5 \%, \pm 0.25 \%, \pm 0.1 \%, \pm 0.05 \%$. The values of the E24/E192 series are in accordance with "IEC publication 60063".

## DERATING:

The power that the resistor can dissipate depends on the operating temperature; see Fig. 2

Fig. 2 Maximum dissipation in percentage of rated power As a function of the ambient temperature

## MOUNTING

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Chip placement can be on ceramic substrates and printed-circuit boards (PCBs).
Electrical connection to the circuit is by individual soldering condition
The end terminations guarantee a reliable contact.

## SOLDERING CONDITION

The robust construction of chip resistors allows them to be completely immersed in a solder bath of $260^{\circ} \mathrm{C}$ for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at $235^{\circ} \mathrm{C}$ during 2 seconds within lead-free solder bath. The test condition for no leaching is $260^{\circ} \mathrm{C}$ for 30 seconds. Typical examples of soldering profile and condition that provide reliable joints without any damage are given in Fig 3. and Table 1.

Fig. 3 Infrared soldering profile for Chip Resistors

Table 1. Infrared soldering condition for Chip Resistors

| Temperature Condition | Exposure Time |
| :--- | :--- |
| Average ramp-up rate $\left(217^{\circ} \mathrm{C}\right.$ to $\left.260^{\circ} \mathrm{C}\right)$ | Less than $3^{\circ} \mathrm{C} /$ second |
| Between 150 and $200^{\circ} \mathrm{C}$ | Between $60-120$ seconds |
| $>217^{\circ} \mathrm{C}$ | Between $60-150$ seconds |
| Peak Temperature | $260^{\circ} \mathrm{C}+0 /-5^{\circ} \mathrm{C}$ |
| Time within $245^{\circ} \mathrm{C}$ | Min. 30 seconds |
| Ramp-down rate (Peak to $\left.217^{\circ} \mathrm{C}\right)$ | Less than $6^{\circ} \mathrm{C} /$ second |
| Time from $25^{\circ} \mathrm{C}$ to Peak | No greater than 480 seconds |

## CATALOGUE NUMBERS

The resistors have a catalogue number starting with .
