Multilayer Ceramic Capacitors

1. INTRODUCTION

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

WTC RH series MLCC are used at high frequencies generally and have a small temperature coefficient of capacitance, typical within the $\pm 30\text{ppm}/^\circ\text{C}$ required for X8G classification and have internal electrodes of excellent conductivity. Thus, WTC RH series MLCC will have the feature of low ESR and high Q characteristics.

WTC RH series have high reliability characteristic, life test condition: $150^\circ\text{C} / 2000\text{hrs} / 2x\text{Rated Voltage}$.

2. FEATURES

- b. High Q and low ESR performance at high frequency.
- c. Ultra low capacitance to 0.1pF.
- d. Ultra high reliability ($150^\circ\text{C} / 2000\text{hrs} / 2x$ Rated Voltage).
- e. Can offer high precision tolerance to $\pm 0.05\text{pF}$.
- f. Quality improvement of telephone calls for low

3. APPLICATIONS

- a. Telecommunication products & equipments: Mobile phone, WLAN, Base station, Small cell.
- b. RF module: Power amplifier, VCO.
- c. Tuners.
- d. High quality concern wireless device.

Storage and handling conditions

- (1) To store products at 5 to 40°C ambient temperature and 20 to 70%. related humidity conditions.
- (2) The product is recommended to be used within one year after shipment. Check solderability in case of shelf life extension is needed.

Cautions:

- a. The corrosive gas reacts on the terminal electrodes of capacitors, and results in the poor solderability. Do not store the capacitors in the ambience of corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine, ammonia gas etc.)
- b. In corrosive atmosphere, solderability might be degraded, and silver migration might occur to cause low reliability.
- c. Due to the dewing by rapid humidity change, or the photochemical change of the terminal electrode by direct sunlight, the solderability and electrical performance may deteriorate. Do not store capacitors under direct sunlight or dewing condition. To store products on the shelf and avoid exposure to moisture.

Recommended soldering conditions

The lead-free termination MLCCs are not only to be used on SMT against lead-free solder paste, but also suitable against lead-containing solder paste. If the optimized solder joint is requested, increasing soldering time, temperature and concentration of N₂ within oven are recommended.
